DESCRIPTION

G.V.C. ORGANIC FARM DIGESTANT is a high potency digestant product designed for use in farm animal manure pits, lagoons, slurrystores, feedlots and pens. It utilizes the powerful waste digesting properties of natural enzymes and bacteria to keep waste systems in a free-flowing condition while it reduces odors. Regular use will establish thriving colonies of these bacteria to provide continuous digestion.

DIRECTIONS

When beginning treatment program, treat the pit every week. After the digestion process is underway, treatments may be reduced to once or twice per month. Adjust the amount and frequency of addition with consideration to the past build-up of solids and amount of waste water entering the pit. Treat heavier or more frequently if feed, hay, bedding materials or detergent, disinfectants and hardness in the wash water entering the pit. Make an initial treatment immediately after the pit is pumped out. For pits with more than 3 feet of solids, double the treatment amount for the first 8 weeks.

Within a few days after the initial treatment, foam and/or solids will appear to float to the top. Crust on the top of the pit will begin to wet and eventually sink. Significant reductions in odor will be noticed after one to two weeks, as the bacteria and enzymes go to work digesting the solids at the bottom and in the slurry. Gas pockets trapped within the solids layer will be broken open and dispersed evenly and safety.

Solids will take time to remove. Stay on a regular treatment schedule for complete digestion over time. Once the system is operating properly, the solids will be reduced to a 4 to 12 inch layer.

For industrial and commercial use only.
For additional information, see Safety Data Sheet.

G.V.C. ORGANIC FARM DIGESTANT

ALL NATURAL - SAFE TO USE
GMO FREE
100% NATURAL ORGANIC PRODUCT

- **DIGESTS ORGANIC WASTE AND ELIMINATES ODORS AND GAS IN MANURE PITS AND LAGOONS**
- **INCREASES PIT CAPACITY**
- **MAKES PUMPING PITS EASIER AND FASTER**
- **IMPROVES MANURE AND WASTE COMPOSITION VALUE**
